

REFITON

Manufacturer of the new generation
humic preparation

An aerial photograph of a vast agricultural field, likely a potato field, showing neat rows of green crops stretching towards the horizon. A tractor is visible in the distance, working in the field. The sky is clear and blue.

Our company specializes in the production of the humic preparation from peat using the technologies that ensure high efficiency of the final product

We use modern equipment and innovative patented technology for the production of the humic preparation Refiton that provides not only maximum efficiency of it, but also ensures the environmental friendliness of the solution

The high content of nutrients in peat significantly foster competitiveness of our product in comparison with other manufacturers of humic preparations and fertilizers all around the world

The quality of raw materials and final products is controlled in our own laboratory
